

SLF4J Logging Framework

Exercise 1: Logging Error Messages and Warning Levels

Source Code

LoggingExample.java

```
package com.kundana.junit;
```

```
import org.slf4j.Logger;
```

```
import org.slf4j.LoggerFactory;
```

```
public class LoggingExample {
```

```
    private static final Logger logger = LoggerFactory.getLogger(LoggingExample.class);
```

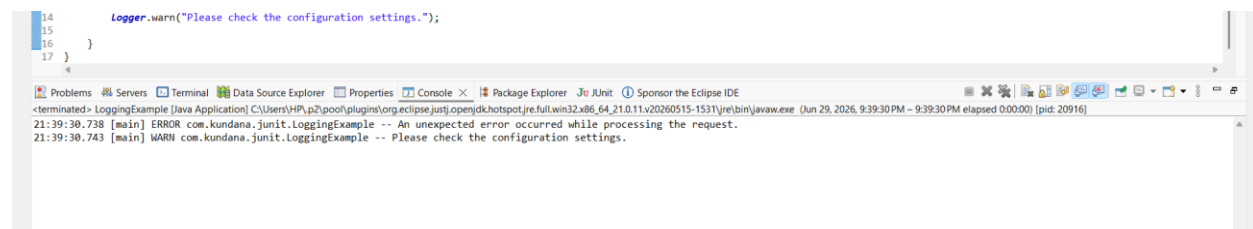

```
    public static void main(String[] args) {
```

```
        logger.error("An unexpected error occurred while processing the request.");
```

```
        logger.warn("Please check the configuration settings.");
```

```
    }
```

```
}
```

Result

The SLF4J logging framework was successfully implemented to display error and warning messages. The application logged the messages using different log levels, and the program executed successfully without any runtime errors.
