

ReactJS HOL 12

Conditional Rendering in React

In this exercise, I developed a React application named **ticketbookingapp** to understand conditional rendering in React. I implemented Login and Logout functionality using React state. Depending on the user's login status, the application conditionally displayed either the Guest page or the User page. The application executed successfully and produced the expected output.

Source Code

LoginControl.js

```
import React, { useState } from "react";

function LoginButton(props) {
  return (
    <button onClick={props.onClick}>
      Login
    </button>
  );
}

function LogoutButton(props) {
  return (
    <button onClick={props.onClick}>
      Logout
    </button>
  );
}

function UserGreeting() {
  return <h1>Welcome back</h1>;
}
```

```

function GuestGreeting() {
  return <h1>Please sign up.</h1>;
}

function Greeting(props) {
  const isLoggedIn = props.isLoggedIn;
  if (isLoggedIn) {
    return <UserGreeting />;
  }
  return <GuestGreeting />;
}

function LoginControl() {
  const [isLoggedIn, setIsLoggedIn] = useState(false);
  const handleLoginClick = () => {
    setIsLoggedIn(true);
  };
  const handleLogoutClick = () => {
    setIsLoggedIn(false);
  };
  let button;
  if (isLoggedIn) {
    button = <LogoutButton onClick={handleLogoutClick} />;
  } else {
    button = <LoginButton onClick={handleLoginClick} />;
  }
  return (
    <div>

```

```
        <Greeting isLoggedIn={isLoggedIn} />
        {button}
    </div>
);
}
export default LoginControl;
```

App.js

```
import './App.css';
import LoginControl from './LoginControl';
function App() {
    return (
        <div>
            <LoginControl />
        </div>
    );
}
export default App;
```

Figure 1: Project Structure

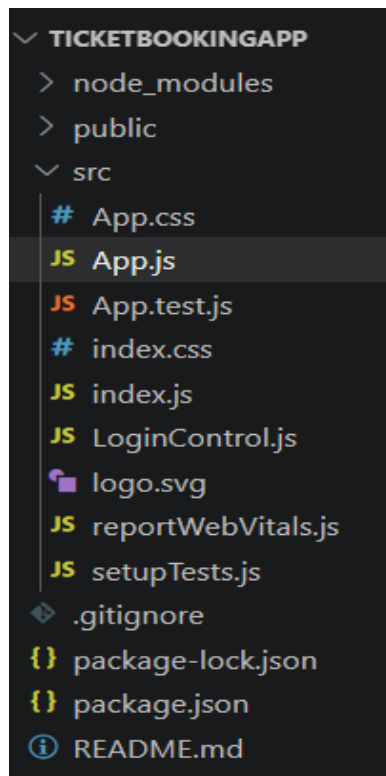

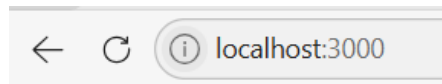

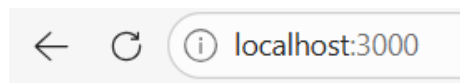

Figure 2: Guest Page

Please sign up.

Login

Figure 3: User Page

Welcome back

Logout

Figure 4: Terminal Output

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS  node +
PS C:\Users\HP\Documents\cricketapp\officespacereentalapp\eventexamplesapp\ticketbookingapp> npm start

You can now view ticketbookingapp in the browser.

  Local:            http://localhost:3000
  On Your Network:  http://10.1.46.55:3000

Note that the development build is not optimized.
To create a production build, use npm run build.

webpack compiled successfully
█
```

Result

The React application was implemented successfully using conditional rendering. The application displayed the Guest page with a Login button when the user was logged out and displayed the User page with a Logout button when the user was logged in. The expected output was obtained successfully.
