

Student Score Calculator

In this exercise, I created a React application named **scorecalculatorapp**. I developed a functional component called **CalculateScore** to display student details such as name, school, total marks, and score percentage. I also applied CSS styling using an external stylesheet to improve the appearance of the application. After running the project, the application displayed the expected output successfully.

CalculateScore.js

```
import '../Stylesheets/mystyle.css';

const percentToDecimal = (decimal) => {
  return (decimal.toFixed(2) + '%');
}

const calcScore = (total, goal) => {
  return percentToDecimal(total / goal);
}

export const CalculateScore = ({ Name, School, total, goal }) => (
  <div className="formatstyle">
    <h1><font color="Brown">Student Details.</font></h1>
    <div className="Name">
      <b><span>Name: </span></b>
      <span>{Name}</span>
    </div>
    <div className="School">
      <b><span>School: </span></b>
      <span>{School}</span>
    </div>
    <div className="Total">
```

```
        <b><span>Total: </span></b>
        <span>{total}</span>
        <span> Marks</span>
    </div>

    <div className="Score">
        <b>Score:</b>
        <span>{calcScore(total, goal)}</span>
    </div>
</div>
);
```

[mystyle.css](#)

```
.Name{
    font-weight:300;
    color:blue;
}

.School{
    color:crimson;
}

.Total{
    color:darkmagenta;
}

.formatstyle{
    text-align:center;
    font-size:large;
}

.Score{
```

```

    color:forestgreen;
  }
}

App.js

import { CalculateScore } from './Components/CalculateScore'

function App() {
  return (
    <div>

      <CalculateScore

        Name={"Steeve"}

        School={"DNV Public School"}

        total={284}

        goal={3}

      />

    </div>

  );
}

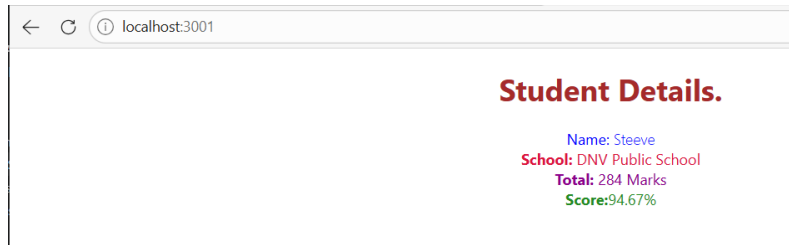

export default App;

```

- **Figure 3: Terminal Output**

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS

PS C:\Users\HP\Documents\scorecalculatorapp> npm start

You can now view scorecalculatorapp in the browser.

  Local:      http://localhost:3001
  On Your Network: http://10.1.46.55:3001

Note that the development build is not optimized.
To create a production build, use npm run build.

webpack compiled successfully
```

Result

The Student Score Calculator application was created successfully using React. The application calculated the student's score percentage and displayed the student details with appropriate styling. The project executed successfully, and the expected output was displayed without any errors.
