

Week 5

ReactJS-HOL 1

Create Your First React Application

Description

In this exercise, I created my first React application named **myfirstreact** using Create React App. I edited the **App.js** file to display the message "**Welcome the first session of React**". After running the application, the output was displayed successfully in the browser without any errors.

Source Code

App.js

```
function App() {  
  return (  
    <h1>Welcome the first session of React</h1>  
  );  
}  
  
export default App;
```

Figure 1: Project Structure

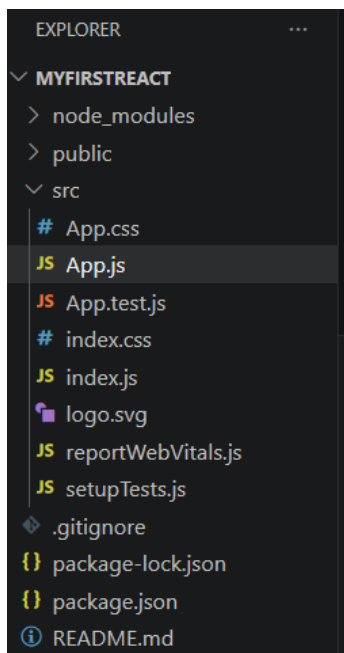

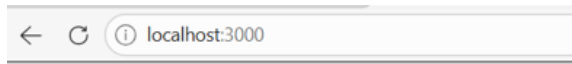

Figure 2: Browser Output (<http://localhost:3000>)

Welcome the first session of React

Figure 3: Terminal Output

```
PS C:\Users\HP\Documents\myfirstreact> npm start

You can now view myfirstreact in the browser.

  Local:            http://localhost:3000
  On Your Network:  http://192.168.1.35:3000

Note that the development build is not optimized.
To create a production build, use npm run build.

webpack compiled successfully
```

Result

The React application was created and executed successfully. The message was displayed correctly in the browser, and the application ran without any errors.
