

ReactJS-HOL 2

Student Management Portal

In this exercise, I created a React application named **StudentApp** for a Student Management Portal. I created three class components: **Home**, **About**, and **Contact**. Each component displays its respective welcome message. Finally, I imported all three components into **App.js** and rendered them successfully. The application ran without any errors, and all three messages were displayed correctly in the browser.

Source Code

Home.js

```
import React, { Component } from "react";

class Home extends Component {
  render() {
    return (
      <div>
        <h3>Welcome to the Home Page of Student Management Portal</h3>
      </div>
    );
  }
}

export default Home;
```

About.js

```
import React, { Component } from "react";

class About extends Component {
  render() {
    return (
      <div>
        <h3>Welcome to the About Page of Student Management Portal</h3>
      </div>
    );
  }
}
```

```
        </div>

    );

}

}

export default About;
```

Contact.js

```
import React, { Component } from "react";

class Contact extends Component {

    render() {

        return (

            <div>

                <h3>Welcome to the Contact Page of Student Management Portal</h3>

            </div>

        );

    }

}

export default Contact;
```

App.js

```
import './App.css';

import Home from './Components/Home';

import About from './Components/About';

import Contact from './Components/Contact';

function App() {

    return (

        <div className="container">

            <Home />
```

```

    <About />

    <Contact />

  </div>

);
}

export default App;

```

Figure 1: Project Structure

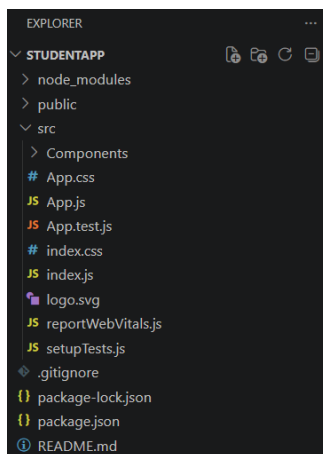

Figure 2: Browser Output

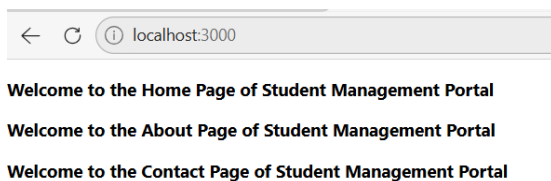

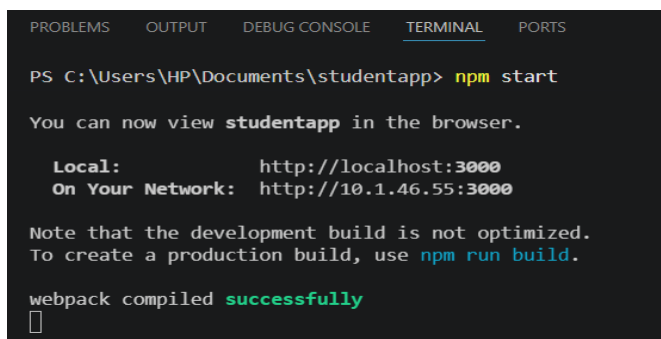

Figure 3: Terminal Output (webpack compiled successfully)

Result

The Student Management Portal React application was created successfully. All three components were rendered correctly, and the application displayed the expected output in the browser without any errors.
