Git Hands-on Lab 5 Report – Clean Up and Push to Remote Git

To verify the repository status, connect the local Git repository to a remote GitHub repository, pull the latest changes, push the local repository to GitHub, and verify the uploaded files in the remote repository.

Prerequisites

- Git installed and configured.
- Existing GitLab repository.
- GitHub account.
- Internet connection.
- Remote GitHub repository created.

Step 1: Verify Repository Status

Open Git Bash, navigate to the GitLab repository, and verify that the repository is in a clean working state.

git status

```
HP@DESKTOP-R20G1F5 MINGW64 ~/GitLab (master)
$ git status
On branch master
nothing to commit, working tree clean
```

Step 2: List Available Branches

Display the available branches in the repository.

git branch

```
HP@DESKTOP-R20G1F5 MINGW64 ~/GitLab (master)
$ git branch
* master
```

Step 3: Connect and Pull the Remote Repository

Connect the local repository to the GitHub remote repository and pull the latest changes from the remote repository.

git remote add origin <https://github.com/kundana-ch/GitLab.git>

git remote -v

git pull origin master

Since the GitHub repository was newly created and contained no commits, Git displayed a message indicating that the remote master branch was not found.

```
HP@DESKTOP-R20G1F5 MINGW64 ~/GitLab (master)
$ git remote add origin https://github.com/kundana-ch/GitLab.git

HP@DESKTOP-R20G1F5 MINGW64 ~/GitLab (master)
$ git remote -v
origin https://github.com/kundana-ch/GitLab.git (fetch)
origin https://github.com/kundana-ch/GitLab.git (push)

HP@DESKTOP-R20G1F5 MINGW64 ~/GitLab (master)
$ git pull origin master
fatal: couldn't find remote ref master
```

Step 4: Push the Local Repository to GitHub

Push the local master branch to the remote GitHub repository.

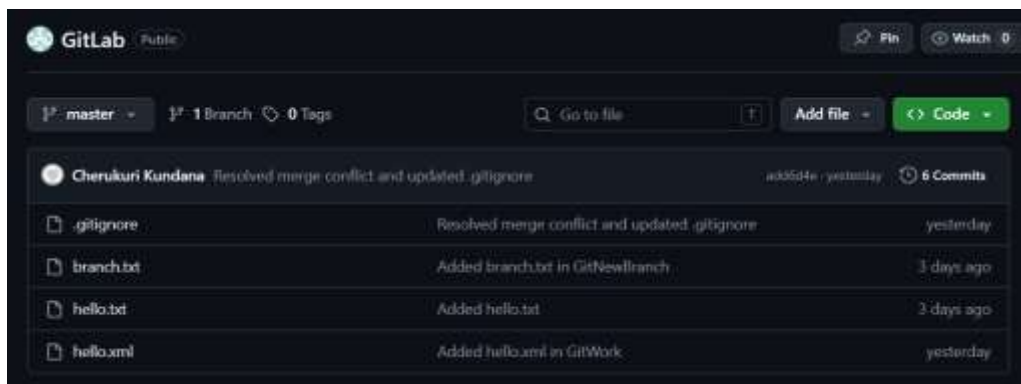

```
git push -u origin master
```

The repository was successfully linked with the remote master branch, and all local commits were uploaded successfully.

```
HP@DESKTOP-R20G1F5 MINGW64 ~/GitLab (master)
$ git push -u origin master
fatal: User cancelled dialog.
error: unable to read askpass response from 'C:/Program Files/Git/mingw64/bin/git-askpass.exe'
Username for 'https://github.com':
```

Step 5: Verify the Remote Repository

Open the GitHub repository in a web browser and verify that all project files and commit history are available.

Result

The local Git repository was successfully connected to the remote GitHub repository. The repository status was verified, the remote repository was configured successfully, the local commits were pushed to GitHub, and the uploaded files were verified in the remote repository.
